20037 Paderno Dugnano (MI)

Zona Industriale
67062 Magliano de' Marsi (AQ)

Tel. (0039) 02.99044533

Fax (0039) 02.9105503

These filters are normally installed on the side channel blowers' suction in order to protect the blowers from dust and other solids that may damage them. They are made with a metal painted casing that is easy to dismantle and reassemble manually, thanks to the slotted screw at the top. Internally, there is a standard filtering paper of 7 micron, but, on demand, it is possible to have filtering elements in other materials, such as polypropylene and stainless steel.

CODE	FLOW RATE mc/h	CONNECTION A	DIMENSIONS IN mm			SPARE CARTRIDGE
